SUBJECT: COLOR MEASUREMENT WITH DISTRIBUTED SENSORS IN A COLOR

HARD COPY APPARATUS

THE COMMISSIONER OF PATENTS ALEXANDRIA, VA 22313-1450

**RESPONSE TO THE OFFICE ACTION MAILED MAY 18, 2004** 

## AMENDMENTS

The following listing of Claims will replace all prior versions and listing of claims in the application.

1. (currently amended) A system for color measurement for a color hard copy apparatus, having a print media transport path, comprising:

an illumination source adjacent to said path;

a plurality of photodetectors adjacent to said path; and

a test pattern strips each of a single color formed on a sheet of media traveling said path, the pattern each strip having a geometric configuration such that each of said photodetectors detects substantially discrete regions of said pattern that strip having a single color generated by said apparatus.

- 2. (original) The system as set forth in claim 1, further comprising: said photodetectors having predetermined spectral responses.
- 3. (original) The system as set forth in claim 1 wherein the illumination source is broadband.
  - 4. (original) The system as set forth in claim 1, further comprising: a white calibration target mounted within the field of view of all of said sensors.
- 5. (currently amended) A color hard copy apparatus, having a mechanism generating a test pattern of test strips of intended uniform colors on media transported along a predetermined path through said apparatus, comprising:

adjacent said path downstream of the mechanism, a broad band illumination source mounted for illuminating said strips pattern; and
